

## Mulch Film made from Corn Starch

*Completely Compostable and Biodegradable*

Less Water  
No Weeds  
No Pollution or Toxicity

Meets Australian  
Standard:  
AS 4736 – 2006.

### Areas of Use;

- Domestic vegetable or flower beds
- Market Gardens
- Planting and establishment phase of trees/shrubs

### Features & Benefits;

- Suppresses weed growth
- Less water needed for irrigation
- Higher soil temperature
- “Breathes” Allowing air and water vapour to pass through the film
- Earlier crop production
- Made from starch so it can be either left in the soil to be broken down by the micro-organisms or it can be composted in a dedicated composting system – the choice is yours.

### Directions;

- Prepare soil for planting including removal of any plants, fertilising and watering
- Spread film across prepared soil, cutting out holes for plants
